

AI EMBODIMENT · INVESTOR OVERVIEW

Bo Nini

An AI companion that lives on your desktop —
and the embodiment layer every agent moves to next.

bonini.biz · Jack Hagman, Founder & Systems Architect

THE SHIFT

AI is still a text box.

Agents are getting radically more capable — but the way we interact with them hasn't moved. We still type prompts into a blank field and wait. The next interface isn't a better prompt box. It's a presence you talk to, gated only on voice and video latency — and that latency is clearing now.

TODAY

Type → wait → read.

An invisible tool you operate. No presence, no continuity, no relationship — you start from zero every session.

NEXT

Talk → a presence responds.

An embodied companion that remembers, acts on its own, and lives alongside you. The interface stops being a field and becomes a face.

THESIS

Embodiment is the next interface.

When latency clears, agents stop being tools you operate and become presences you live alongside. Bo Nini is building that layer now — with a consumer companion as the visible proof point and a licensing platform underneath as the real business.

THE PROOF POINT

Consumer companion

A single, trustworthy robot companion people actually want to keep on their desktop. Visible, shareable, and the fastest way to prove embodiment works.

THE BUSINESS

Embodiment infrastructure

The behavioral-awareness and embodiment core underneath — licensed to whole industries once agents move off the keyboard. Enterprise infrastructure in a consumer costume.

Bo lives in a window on your desktop.

A companion, not a takeover

A stylized robot in its own studio-apartment window — present when you want it, never hijacking your screen.

One companion, real depth

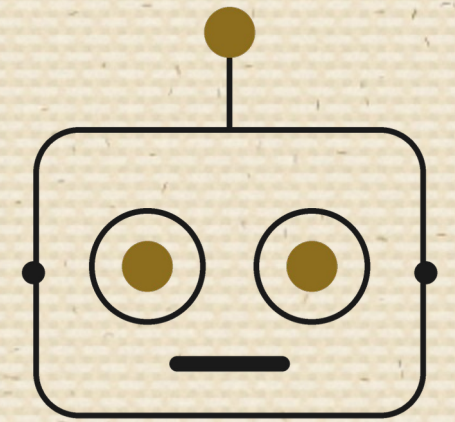

A single companion with memory, autonomy, and a life of its own. Depth over a roster of shallow bots.

Private by default

Runs on your machine, or through zero-retention cloud. Your conversations aren't the product.

Robot now, custom companions next

V1 launches with a robot to reach market fast. The end game is fully custom, humanoid companions.

$15

per month, flat — no tiers

WHY BO

The clean companion in a messy category.

	BO NINI	Replika	Character.AI
Exists without you	**Yes — autonomous daily life**	No — dormant until opened	No — dormant until opened
Privacy	**Local or zero-retention cloud**	Cloud, data-driven	Cloud, data-driven
Incentives	**No streaks, no variable rewards**	Engagement-optimized	Engagement-optimized
Content	**SFW core, brand-safe, app-store-eligible**	Adult content, on-and-off	Heavily filtered

Polished companions self-censor out of trust and privacy. Permissive ones are low quality. Bo takes the defensible seat: private, clean, and genuinely good.

UNDER THE HOOD

The moat isn't the model.

The language model is a swappable commodity behind a single interface. What's defensible is everything wrapped around it — the layer that makes Bo feel alive.

Your desktop

One companion window — the surface the user actually touches.

The Bo Nini layer — the moat

Custom orchestration · persistent memory · autonomous behavior

Any model, swappable

Local via Ollama, or private zero-retention cloud — chosen at runtime, replaceable as models improve.

DEFENSIBILITY

Patent-pending at the core.

PROVISIONAL 01

Zero-retention contextual behavioral-state engine

The core system — eight distinct mechanisms behind how Bo perceives, remembers, and behaves without hoarding data.

PROVISIONAL 02

Supplemental claims

Extends the core with a second set of claims. Both filed, both cured, non-provisional conversions due 2027.

THE LONG-TERM ASSET

A real-time behavioral-awareness layer — presence and emotion detection — protected before any enterprise conversation begins.

BUSINESS MODEL

Flat, honest, and cost-aware.

$15

per month · flat rate · no tiers

Pure software. No hardware, ever.

MARGINS WITHOUT DARK PATTERNS

Every reply costs inference. An in-product energy system meters that cost honestly:

- Local users run unlimited — they pay the compute.
- Cloud users are energy-gated to the real bill.
- Priced to break even on compute, never to milk purchases.

THE PLATFORM

One companion core. Many verticals.

Bo's core licenses to independently funded companies — forks — that reskin the same embodiment and behavioral-awareness layer for their industry. Consumer proves it; licensing scales it.

Elderly Care

Passive distress detection, staff alerts, family peace of mind.

Food Service

Order & upsell at the counter. Founder edge: 15 years in the industry.

Medical Intake

Urgent-care triage and patient intake, always patient.

Retail

Self-checkout guidance and loss prevention.

Education

Agenda-free tutor; homeschool as the beachhead.

Access & Security

Presence-aware entry and monitoring.

A representative slice of a 13-fork registry. Fork planning is deliberately deferred — consumer first.

WHERE WE ARE

Demo done. V1 is next.

- **Demo — finished**

  The desktop-companion demo was completed in September 2026.

- **Landing page — live**

  Animated companion and waitlist capture, operational at bonini.biz.

- **Patents — filed & cured**

  Two provisionals secured; conversions due 2027.

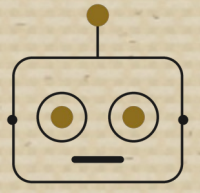

- **Blueprint — documented**

  Full product, economy, fork registry, and investor FAQ written down.

V1 scope simplification puts a shipped product roughly 14–15 months out.

TEAM

Solo founder, unusual range.

Jack Hagman

Founder & Systems Architect

- Self-taught across systems design, economy design, and patent-claim architecture.
- 15 years in food service — a fork wedge, not a detour.
- Ships the whole stack solo: product, economy, IP filings, landing page, and the demo.

FIRST HIRE AT FUNDING

CTO

Equity plus market-rate salary at close. Outreach already drafted.

FOUNDER REDUNDANCY PROTOCOL

Two-deep CTO rule · 48-hour async decision window · budgeted ops support.

THE ASK

$2M for about two years of runway.

$2M	$16M	$81K	~23
raise	pre-money	monthly burn	months of runway

Timeline V1 ships in 14–15 months — leaving ~8 months of runway after launch.

USE OF FUNDS

Where the $2M goes.

Team · $1.40M

Six engineers and artists, the founder, and seven interns — six AI jockeys plus one local ops intern.

Benefits & payroll taxes · $160K

Healthcare, employer payroll taxes, and EOR fees for Mexico hires.

IP & legal · $142K

Patent prosecution, legal defense buffer, retainer, incorporation.

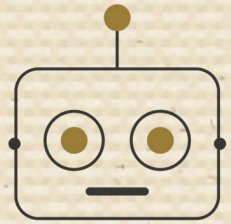

Infrastructure & marketing · $133K

Inference and APIs, launch marketing, dev equipment.

Insurance, tax & reserves · $163K

Business insurance, tax line, dev retention reserve, contingency.

Allocated from the bottoms-up burn model — $81K/month for ~23 months, plus ~$152K in one-time costs.

THE VISION

A presence worth living alongside.

Launch with a robot companion people actually trust. Grow into fully custom, humanoid companions — and the embodiment layer a dozen industries license. Refuge, not escape.
